

Environmental policy statement

Energy saving

Noviflora's modern and contemporary premises are built according to energy saving standards. In order to save the environment and utilize energy as efficiently as possible, we drew up an energy report.

Noviflora considers it important not to waste any energy. In order to counteract any energy wastage, the company uses energy-conserving screens at the loading bays. The use of these screens results in less heating and cooling in the processing hall. The company also uses low-energy light bulbs in its industrial buildings.

Transport

For transporting the plants, we use trucks that meet the strictest emission standards as much as possible. In order to comply with these, the trucks have to be equipped with clean EEV engines. Noviflora also examines new logistics options such as transport by rail or waterways. Using trains and boats, there is much less CO2 emission as compared to road transport using trucks.

Sustainable products

Noviflora is your supplier for environmentally-friendly cultivated plants or biological produced plants and participates in corporate social responsibility trade marks such as MPS.

FSC paper

Noviflora wishes to pull its weight with regard to the preservation and maintenance of the tropical rainforest. In order to contribute to this, the company uses FSC certified paper only. The FSC mark ensures that the raw materials are sourced from responsibly managed forests.

Packaging materials

In the export of plants, we use single-use plant trays. Collected single-use pot plant trays will be made into raw materials for producing new plant trays. So we will participate in pushing back the amount of packaging waste. With respect to other packaging materials, we use PVC free materials and products that do not contain any heavy metals.

Trash separation

Single-use shuttle trays are collected separately from paper and cardboard. Any chemical waste such as batteries is collected separately or reused. The trash in the hall is separated because of being 'green' waste and agricultural refuse remaining after separation of recyclable elements.

Bicycle scheme

Furthermore, we also think of our staff; our employees are able to utilize the bicycle scheme. The bicycle scheme is a project that promotes the use of bicycles in commuter traffic. Employees are able to purchase a tax-friendly bicycle through their employer.

Continuous improvement

The Noviflora Holland BV management is always busy applying the environmental policy and constantly strives to improve this environmental policy further. The management will regularly assess the functioning of the environmental policy, bearing in mind any possible future changes in the organization, the market and in environmental legislation.
